REQUEST FOR RECONSIDERATION

Attention Decisions and Certificate of Corrections Branch
Commissioner for Patents
Post Office Box 1450
Alexandria, Virginia 22313-1450

Dear Sir:

A Request for a Certificate of Correction was recently submitted by fax on November 3, 2005. A copy of Form PTO/SB/44 that was submitted at that time is provided with this facsimile transmittal. There were two errors that needed correction: one in the specification and one in the claims. According to the letter mailed January 18, 2006, a certificate of correction will issue for the error in the specification, but the request to correct the error in the claims was rejected. Applicant requests reconsideration in light of the following explanation:

Claim 1, as printed, was the wrong version of the claim. The correct version of the claim was in the amendment dated April 25, 2005, and the Notice of Allowability was responsive to that amendment. Unfortunately, the claim that was printed was merely a *proposed* amendment that was included as part of an applicant initiated interview request form (PTO-413A) dated March 22, 2005. The interview eventually occurred on

Request for Reconsideration of Certificate of Correction
Patent Number 6,955,380

Page 2 of 3

April 19, 2005. After the interview, the applicant submitted the amendment dated April 25, 2005, and the Notice of Allowance was mailed May 23, 2005. The Notice of Allowance referred to the April 25, 2005 amendment, but the claims that printed were from the interview request form. It is possible that the error was due to the fact that copies of the interview summary and interview request form (with the earlier dated proposed amendment) were attached to the Notice of Allowance. This may have given the appearance that the proposed amendment was later in time than the actual amendment.

The version of claim 1 that appeared with form PTOL-413A and was erroneously printed in the final patent is:

1. A safety latch for a drawer, comprising:
an L-shaped body, including a vertical leg and a horizontal engaging arm,
said vertical leg having a top surface and having a flat outer surface for
mounting to the inside of a drawer, wherein said L-shaped body is configured so that
the horizontal engaging arm will project inwardly into the drawer when the flat outer
surface of the vertical leg is mounted to the inside of a vertical wall of the drawer; and
said engaging arm having a top surface defining forward and rear ramps
and a trough between said forward and rear ramps, said trough defining an upward
opening, and said ramps terminating short of said upward opening in a vertical plane;
wherein said engaging arm is movable up and down relative to said
vertical leg; and
wherein the top surface of said engaging arm, including at least a portion
of said trough, is at a higher elevation than the top surface of said vertical leg when said
L-shaped body is in a relaxed, unflexed position, so that, when said vertical leg is
mounted to the inside of a vertical wall of the drawer flush with the top of the drawer, the
top surface of said engaging arm and at least a portion of said trough project above the
top of the drawer.

The correct version of claim 1, as found in the amendment dated April 25, 2005, is:

1. A safety latch for a drawer, comprising:
an L-shaped body, including a vertical leg; and a horizontal leg projecting
inwardly from said vertical leg; and
an engaging arm projecting from said horizontal leg along a plane parallel
to and offset from said vertical leg,
said vertical leg having a flat outer surface for mounting to the inside of a
drawer, and
said engaging arm having a top surface defining forward and rear ramps
and a trough between said forward and rear ramps, said trough defining an upward
opening, and said ramps terminating short of said upward opening in a vertical plane;
wherein said engaging arm is movable up and down relative to said
vertical leg.

Request for Reconsideration of Certificate of Correction
Patent Number 6,955,380

RECEIVED
CENTRAL FAX CENTER

Page 3 of 3

FEB 21 2006

The correct version of claim 1 should replace the version of claim 1 that was erroneously printed. This error was caused by the Patent Office. Therefore, no fee is due. For convenient reference, Applicant is including copies of the Notice of Allowability Form PTOL-37; pages 1 and 3 from the April 25, 2005 amendment; Interview Request Form PTOL-413A; and page 1 of the proposed amendment accompanying the Interview Request Form with pertinent parts circled. Thank You.

Respectfully submitted,

Theresa Fritz Camoriano

UNITED STATES PATENT AND TRADEMARK OFFICE CERTIFICATE OF CORRECTION

Page 1 of 2

PATENT NO. : 6,955,380
APPLICATION NO.: 10/713,418
ISSUE DATE : 10/18/2005
INVENTOR(S) : Sebastian Barr

It is certified that an error appears or errors appear in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

Columns 1 and 2:

The first three paragraphs of the Description of the Preferred Embodiment are in the wrong order. The order of the paragraphs should be reversed, and the text beginning at column 1, line 51 and ending at column 2, line 17 should be replaced with the following:

FIGS. 1-8 show a drawer safety latch 10 made in accordance with the present invention. Referring to FIGS. 2, 4, 5, and 6, the safety latch 10 is a substantially "L" shaped body (seen best in FIG. 6), including a vertical leg 12, a horizontal leg 36 projecting inwardly from said vertical leg 12, and an engaging arm 20 projecting forward from said horizontal leg 36. The vertical leg 12 lies in one plane, and the engaging arm 20 extends along a second plane that is parallel to and offset from the vertical leg.

The vertical leg 12 has an inside face 14, a flat outside face 16, and a top surface 18. In this embodiment 10, there is an adhesive strip adhered to the outside face 16, including a peel-off protective sheet 24, which covers the adhesive strip until the user is ready to install the safety latch 10 in the drawer 22, at which time he peels off the protective sheet 24 to expose the adhesive surface in order to adhere the vertical leg 12 to the side of the drawer 22.

The engaging arm 20 has a top surface including front and rear ramps 26, 28, which are collinear, and a trough 30 between the two ramps 26, 28. The trough 30 has substantially straight front and rear walls and defines an upward opening. Both of the ramps 26, 28 terminate short of that upward opening in a vertical plane, leaving the upward opening free to receive the front face of the cabinet, so the trough receives and abuts the front face of the cabinet and stops the travel of the drawer both when the drawer is opening and when the drawer is closing. As is explained in more detail later, the trough 30 has a depth which permits it to engage the front face of the cabinet 34 (see FIG. 3). The top surface of the front ramp 26 tapers from a lower elevation in front to a higher elevation in back, where it meets the trough 30. The top surface of the rear ramp 28 tapers from a higher elevation in front, where it meets the trough 30, to a lower elevation in back.

Amendment
U.S. Patent Application S.N. 10/713,418
Page 3 of 8

Please amend the claims to the following:

1.(currently amended) A safety latch for a drawer, comprising:

an L-shaped body, including a vertical leg; and a horizontal leg projecting inwardly from said vertical leg; and

an a-horizontal engaging arm projecting from said horizontal leg along a plane parallel to and offset from said vertical leg,

said vertical leg having a flat outer surface for mounting to the inside of a drawer; and

said engaging arm having a top surface defining forward and rear ramps and a trough between said forward and rear ramps, said trough defining an upward opening, and said ramps terminating short of said upward opening in a vertical plane;

wherein said engaging arm is movable up and down relative to said vertical leg.

2.(currently amended) A safety latch for a drawer as recited in claim 1, wherein said L-shaped body is made in a unitary piece, and including a horizontal leg projecting inwardly from said vertical leg, wherein said engaging arm projects forward from said horizontal leg and is movable by flexing said unitary piece.

PATENT NO. : 6,955,380
APPLICATION NO.: 10/713,418
ISSUE DATE : 10/18/2005
INVENTOR(S) : Sebastian Barr

It is certified that an error appears or errors appear in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

Columns 1 and 2:

The first three paragraphs of the Description of the Preferred Embodiment are in the wrong order. The order of the paragraphs should be reversed, and the text beginning at column 1, line 51 and ending at column 2, line 17 should be replaced with the following:

FIGS. 1-8 show a drawer safety latch 10 made in accordance with the present invention. Referring to FIGS. 2, 4, 5, and 6, the safety latch 10 is a substantially "L" shaped body (seen best in FIG. 6), including a vertical leg 12, a horizontal leg 36 projecting inwardly from said vertical leg 12, and an engaging arm 20 projecting forward from said horizontal leg 36. The vertical leg 12 lies in one plane, and the engaging arm 20 extends along a second plane that is parallel to and offset from the vertical leg.

The vertical leg 12 has an inside face 14, a flat outside face 16, and a top surface 18. In this embodiment 10, there is an adhesive strip adhered to the outside face 16, including a peel-off protective sheet 24, which covers the adhesive strip until the user is ready to install the safety latch 10 in the drawer 22, at which time he peels off the protective sheet 24 to expose the adhesive surface in order to adhere the vertical leg 12 to the side of the drawer 22.

The engaging arm 20 has a top surface including front and rear ramps 26, 28, which are collinear, and a trough 30 between the two ramps 26, 28. The trough 30 has substantially straight front and rear walls and defines an upward opening. Both of the ramps 26, 28 terminate short of that upward opening in a vertical plane, leaving the upward opening free to receive the front face of the cabinet, so the trough receives and abuts the front face of the cabinet and stops the travel of the drawer both when the drawer is opening and when the drawer is closing. As is explained in more detail later, the trough 30 has a depth which permits it to engage the front face of the cabinet 34 (see FIG. 3). The top surface of the front ramp 26 tapers from a lower elevation in front to a higher elevation in back, where it meets the trough 30. The top surface of the rear ramp 28 tapers from a higher elevation in front, where it meets the trough 30, to a lower elevation in back.
